

Extension 2: Cars Supermarket

Car Sales

Overview: You own a company called **Cars Supermarket** which sells cars. You need to create a suitable database to keep a record of the different types of car models you keep in stock.

1. You first need to create a table including appropriate field types (**Model Name, Brand, Type, Year, Price, AC (Boolean) & Extras**) – Include Toyota Cars
2. You then need to add at least **10 different records (cars)** to the database.
3. Create a simple report (Landscape) showing all only the **Toyota Cars** in stock.

Task2

Create a database for the sales staff at **Cars Supermarket** and add **10 records. Include cars sold as a field**

Create a simple report (Landscape) showing only the sales people who have sold more than 5 cars.
